

Bay Area Dermatology

Janice R. Chang, M.D.

Terry E. Williams, M.D.

Care of the Skin Treated with Liquid Nitrogen

Area will usually blister within the first day

Bleeding into the blisters is common and nothing to worry about

You may open the blister with a needle (sterilized in alcohol) especially if there is pain

If area is painful, take Aspirin or Tylenol and use an ice pack

Keep it open to the air as much as possible

Clean the area with soap and water and apply hydrogen peroxide as needed

Call our office if there are any other concerns:

Webster office – (281) 332-8571

Texas City office – (409) 938-1260
